To Whom it May Concern

RE: LETTER OF SUPPORT FOR SAM RAHNEMAYAN

I am pleased to provide my strong support for Sam Rahnemayan, whom I supervised during his Master's thesis project at the University of Technology Sydney. Sam undertook a technically demanding project focused on the study of neuromuscular adaptation to exoskeleton-assisted movement, integrating robotic systems with multimodal data analysis including electromyography (EMG) and motion capture.

Throughout the project, Sam demonstrated a high level of technical competence and professionalism. His work involved the development and integration of an upper-body robotic exoskeleton platform (Hocoma Armeo Power), alongside the design and execution of experimental protocols to collect and analyse human-subject data.

Sam approached this interdisciplinary challenge with initiative and independence, often progressing components of the work autonomously while maintaining clear and effective communication with supervisors. He showed particular strength in debugging hardware systems and ensuring reliable data collection, which was critical to the success of the project. His methodology was systematic and well-structured, enabling consistent progress throughout the thesis period.

In addition to his technical abilities, Sam's contributions to documentation and knowledge transfer were particularly valuable. He developed clear and comprehensive materials that will support future users of the exoskeleton platform, reflecting a strong awareness of the broader research context and the importance of reproducibility and usability in experimental systems.

Overall, Sam produced work of a very high standard, combining strong analytical skills with practical engineering capability. He is a motivated and capable researcher with the ability to work both independently and collaboratively across disciplines.

I have no hesitation in recommending Sam Rahnemayan for future research, academic, or industry opportunities. Please feel free to contact me if further information is required.

Sincerely,

Marc Carmichael
